

Business Model Development

Report

Group Names:

Objective: To identify a market pain point, develop a sustainable business model using the Business Model Canvas (BMC), and execute a digital prototype (Web/Mobile App).

Phase 1: Problem Identification & Ideation

Activity 01: Problem Identification

The foundation of any business is solving a real-world problem. This phase involves:

- **Pain Point Analysis:** Identifying specific frustrations or inefficiencies faced by a target demographic.
- **Market Survey:** Conducting primary research (interviews/surveys) and secondary research to validate that the problem is widespread enough to justify a solution.

Activity 02: Design a Digital Solution

Once the problem is validated, the group employs **Ideation Techniques** such as:

- **Brainstorming/Mind Mapping:** Generating a wide range of digital interventions.
- **SCAMPER:** Refining ideas by Substituting, Combining, or Adapting existing solutions.
- **Selection:** Choosing the most viable Web or Mobile App concept based on technical feasibility and market need.

Phase 2: Developing the Business Model Canvas (BMC)

The BMC is a strategic management tool used to visualize the entire business logic on a single page.

Activity 03: Infrastructure & Value

- **Value Proposition:** What unique value does the app provide? (e.g., speed, cost-reduction, accessibility).
- **Key Partners:** External companies or suppliers needed (e.g., Cloud hosting providers, payment gateways).
- **Key Resources:** Essential assets (e.g., software developers, proprietary algorithms).
- **Key Activities:** Critical tasks to make the model work (e.g., platform maintenance, marketing).

Activity 04: Customer Interaction

- **Customer Segments:** Defining the specific personas (e.g., Gen Z students, small business owners).
- **Customer Relationships:** How the brand interacts (e.g., automated support, community forums).
- **Channels:** How the product reaches the user (e.g., App Store, Social Media, Direct Sales).

Activity 05: Financial Viability

- **Cost Structure:** Mapping out fixed and variable costs (e.g., server costs, employee salaries).
- **Revenue Streams:** How the app makes money (e.g., subscription fees, freemium models, in-app advertising).

Phase 3: Prototype Development

Activity 06: Low-Fidelity Prototyping

The focus here is on **structure and flow** rather than aesthetics.

- **Method:** Paper sketches or basic digital wireframes (using tools like Balsamiq).
- **Goal:** To map out the User Experience (UX) and navigation logic.

Activity 07: Customer Feedback

The low-fidelity prototype is shown to potential users.

- **Process:** Users attempt to complete tasks while providing "think-aloud" feedback.
- **Outcome:** Identifying friction points before writing any code.

Activity 08 & 09: High-Fidelity & Presentation

- **High-Fidelity Prototype:** Creating a "clickable" prototype that looks like the final product using tools like **Figma or Adobe XD**, or developing a functional **MVP (Minimum Viable Product)**.
- **Final Presentation:** Demonstrating the UI (User Interface), explaining the business logic, and proving how the digital solution addresses the original pain points.
